Sample Problems and Solutions from LA County Math Field Day 2013

Below, we will examine some representative problems from the 2013 contest, along with detailed solutions and explanations. These examples illustrate the diversity and depth of the problems posed.

Problem 1: Algebra ? Solving a System of Equations

Problem:

Find all real solutions \((x, y)\) to the system:

\[

\begin{cases}

x^2 + y^2 = 25 \\

x - y = 3

\end{cases}

\]

Solution:

Step 1: From the second equation, express \(x\) in terms of \(y\):

\[

x = y + 3

\]

Step 2: Substitute into the first equation:

\[

(y + 3)^2 + y^2 = 25

\]

\[

y^2 + 6y + 9 + y^2 = 25

\]

\[

2y^2 + 6y + 9 = 25

\]

Step 3: Simplify:

\[

2y^2 + 6y = 16

\]

\[

2y^2 + 6y - 16 = 0

\]

Divide through by 2:

\[

y^2 + 3y - 8 = 0

\]

Step 4: Solve quadratic:

\[

$$y = \frac{-3 \pm \sqrt{9 - 4 \times 1 \times (-8)}}{2} = \frac{-3 \pm \sqrt{9 + 32}}{2} = \frac{-3 \pm \sqrt{41}}{2}$$

Step 5: Find corresponding x:

$$x = y + 3$$

$$x = \frac{-3 \pm \sqrt{41}}{2} + 3 = \frac{-3 \pm \sqrt{41} + 6}{2} = \frac{3 \pm \sqrt{41}}{2}$$

Final solutions:

$$\boxed{\left(\frac{3 + \sqrt{41}}{2}, \frac{-3 + \sqrt{41}}{2} \right) \quad \text{and} \quad \left(\frac{3 - \sqrt{41}}{2}, \frac{-3 - \sqrt{41}}{2} \right)}$$

Problem 2: Geometry ? Area of a Composite Figure

Problem:

A triangle ABC has points $A(0,0)$, $B(6,0)$, and $C(0,8)$. A circle centered at A passes through B. Find the area of the region inside the circle and the triangle ABC.

Solution:

Step 1: Find the radius of the circle centered at $A(0,0)$. Since it passes through $B(6,0)$:

$$
r = \text{distance between }A \text{ and } B = 6
$$

Step 2: Equation of the circle:

$$
x^2 + y^2 = 36
$$

Step 3: Find the intersection points between the circle and the triangle's sides, especially AC and AB.

- Side AB lies on the x-axis from $(0,0)$ to $(6,0)$. Since B is on the circle, the segment is fully inside the circle.

- Side AC: from $(0,0)$ to $(0,8)$. At $x=0$:

$$
x^2 + y^2 = y^2 = 36 \Rightarrow y = \pm 6
$$

But $y=8$ at C, which is outside the circle. So, AC intersects the circle at $y=6$ (since $6
Step 4: The intersection points inside the triangle are:

- On AC: at $(0,6)$
- On AB: at $B(6,0)$, which is on the circle
- The point $A(0,0)$

Step 5: The region inside both the circle and the triangle is bounded by:

- The segment \(AB\)
- The segment \(AC\) from \(A\) to \((0,6)\)
- The arc of the circle between \((0,6)\) and \(B(6,0)\)

Step 6: Find the area:

- Area of the sector: The sector between points \((0,6)\) and \((6,0)\).

- Angles:
- For \(A(0,0)\), the points:
- \(A\) has \((0,0)\)
- \(B(6,0)\): angle \(0^\circ\)
- \(C(0,8)\): outside the circle, but the intersection point \((0,6)\) is relevant

Calculating the angle at \(A\):

- \(\vec{A B} = (6, 0)\)
- \(\vec{A C} = (0,8)\)
- The points of interest on the circle are:
- \(B(6,0)\): on circle
- \(P(0,6)\): on circle and inside the triangle

The arc between \(B\) and \(P\) corresponds to a sector of the circle from \((6,0)\) to \((0,6)\).

- Find the angles:
- \(B\) has vector \((6,0)\), angle \(0^\circ\)
- \(P\) has vector \((0,6)\), angle \(90^\circ\)

- Area of sector:

\[

\text{Sector area} = \frac{\theta}{360^\circ} \times \pi r^2

\]

where $\theta = 90^\circ$.

$$
\text{Sector area} = \frac{90^\circ}{360^\circ} \times \pi \times 36 = \frac{1}{4} \times \pi \times 36 = 9\pi
$$

- Area of triangle $A B P$:

Vertices: $A(0,0)$, $B(6,0)$, $P(0,6)$

$$
\text{Area} = \frac{1}{2} |x_1(y_2 - y_3) + x_2(y_3 - y_1) + x_3(y_1 - y_2)|
$$

$$
= \frac{1}{2} |0(0 - 6) + 6(6 - 0) + 0(0 - 0)| = \frac{1}{2} |0 + 36 + 0| = 18
$$

- Final area inside the circle and triangle

LA County Math Field Day 2013 Problems: An In-Depth Analysis

Mathematics competitions have long served as fertile ground for fostering problem-solving skills, logical reasoning, and creative thinking among students. Among these, the Los Angeles County Math Field Day (LAC MFD) stands out as a prominent annual event, drawing participants from numerous schools and serving as a benchmark for mathematical excellence. The 2013 edition of the LAC MFD presented a diverse set of problems that challenged students across various topics, from algebra and geometry to combinatorics and number theory. In this comprehensive review, we will explore the structure, themes, and mathematical depth of the LAC County Math Field Day 2013 Problems, analyzing their design and educational significance.

Overview of the LAC County Math Field Day 2013

The 2013 competition, held in early spring, attracted hundreds of students from middle and high schools across Los Angeles County. The event was structured into multiple rounds, including individual, team, and relay components, each designed to assess different facets of mathematical ability.

Key features of the 2013 problems:

- Diverse Topics: Covering algebra, geometry, number theory, combinatorics, and logic.
- Problem Difficulty: Ranged from accessible questions suitable for less experienced students to challenging puzzles for advanced competitors.
- Problem Format: Multiple-choice, short answer, and proof-based questions.
- Educational Focus: Emphasized reasoning, ingenuity, and the ability to articulate solutions clearly.

The problems were crafted by a team of experienced mathematicians and educators, aiming to stimulate curiosity and deepen understanding of fundamental mathematical principles.

Analysis of Problem Types and Themes

The 2013 set of problems exemplifies a deliberate balance between computational exercises and conceptual puzzles. The following subsections dissect some of the core themes and problem types encountered during the competition.

Algebra and Number Theory Challenges

Algebraic problems often required students to manipulate equations and inequalities with ingenuity. For example, one problem posed a scenario involving integer solutions to a quadratic relation, prompting participants to explore factorization and divisibility properties. Number theory questions frequently involved properties of primes, divisibility, and modular arithmetic, encouraging students to leverage fundamental theorems such as Fermat's Little Theorem or the Euclidean Algorithm.

Sample themes included:

- Finding integer solutions to polynomial equations.
- Exploring divisibility patterns in sequences.
- Applying modular arithmetic to determine possible remainders.

Geometry and Spatial Reasoning

Geometry problems in 2013 tested students' understanding of shapes, angles, and spatial relationships. Many involved classical figures like triangles, circles, and polygons, but with a twist that required creative reasoning.

Notable problem types:

- Proving properties of cyclic quadrilaterals.
- Calculating areas and perimeters with given constraints.
- Constructing auxiliary lines to uncover hidden properties.

For instance, a problem asked students to determine the maximum area of a certain inscribed polygon under specified conditions, requiring both geometric insight and algebraic calculations.

Combinatorics and Counting

Counting problems challenged students to analyze arrangements, permutations, and combinations. These problems often involved clever counting techniques, such as the Principle of Inclusion-Exclusion or symmetry arguments.

Examples included:

- Counting the number of arrangements satisfying certain adjacency conditions.
- Determining the probability of specific configurations.
- Enumerating subsets with particular properties.

Logical Reasoning and Puzzles

Beyond standard topics, some problems were designed as logic puzzles, emphasizing deductive reasoning. These often involved scenarios with constraints that could be translated into logical statements, requiring students to methodically eliminate impossibilities.

Sample problem types:

- Sudoku-like puzzles with a mathematical twist.
- Deductive puzzles involving sequence patterns.
- Riddles that rely on pattern recognition.

Selected Problems from LAC County Math Field Day 2013

To illustrate the depth and variety of the 2013 problems, let's analyze a few representative questions:

Problem 1: Algebraic Expression Optimization

"Find the maximum value of the expression $\frac{x^2 + y^2}{x + y}$, where x and y are positive real numbers."

Analysis:

This problem tests algebraic manipulation and optimization techniques. Students should recognize that the expression is symmetric and consider methods such as substitution or calculus (if permitted) to find extrema. The key insight involves rewriting the expression or employing the AM-GM inequality.

Solution outline:

- Since $x, y > 0$, consider symmetry.
- Let $s = x + y$, $p = xy$.
- Rewrite numerator: $x^2 + y^2 = (x + y)^2 - 2xy = s^2 - 2p$.
- Expression becomes $\frac{s^2 - 2p}{s} = s - \frac{2p}{s}$.
- To maximize, minimize p (since $p > 0$).

By the AM-GM inequality:

$$

p = xy \leq \left(\frac{x + y}{2}\right)^2 = \frac{s^2}{4}

$$

Thus,

$$

\frac{x^2 + y^2}{x + y} = s - \frac{2p}{s} \geq s - \frac{2 \times \frac{s^2}{4}}{s} = s - \frac{s}{2} = \frac{s}{2}

$$

As $s \to \infty$, the expression grows without bound, suggesting the maximum is unbounded. Alternatively, if the problem constrains x, y within certain bounds, the maximum can be determined accordingly.

Problem 2: Geometry ? Maximal Area within Constraints

"A triangle inscribed in a circle has two sides of fixed length, a and b. Determine the position of the third vertex on the circle that maximizes the area of the triangle."

Analysis:

This problem involves understanding the properties of cyclic triangles and how the area depends on the position of the third vertex. The solution leverages the Law of Cosines and the formula for the area of a triangle.

Key ideas:

- The area of the triangle can be expressed as $\frac{1}{2} ab \sin C$, where C is the angle between sides a and b.
- Since the triangle is inscribed in a circle, the Law of Sines relates side lengths to the angles.
- To maximize the area, maximize $\sin C$, which occurs when $C = 90^\circ$.

Therefore, the maximum area is achieved when the third vertex is positioned such that the angle between sides a and b is right-angled.

Educational Significance and Problem Design

The problems from the 2013 LAC County Math Field Day exemplify several pedagogical principles:

- Balance of Difficulty: Ensuring problems are accessible yet challenging, encouraging growth without discouraging participants.
- Diverse Skill Development: Covering multiple mathematical domains to foster well-rounded problem-solving abilities.
- Encouragement of Creative Thinking: Many problems require students to approach familiar concepts from novel angles.
- Promotion of Mathematical Communication: Some tasks emphasize clear reasoning and justification, vital skills for mathematicians.

Furthermore, the problem set reflects an understanding that competition math is not solely about

rote techniques but about deep comprehension and strategic thinking.

Conclusion: The Legacy and Impact of the 2013 Problems

The LA County Math Field Day 2013 Problems serve as an enduring testament to the event's commitment to mathematical excellence and education. Their variety, depth, and pedagogical quality continue to inspire students and educators alike. Analyzing these problems reveals not only the mathematical content but also the underlying philosophy: fostering curiosity, resilience, and a love for problem-solving.
