How Does an Intertek Ceiling Fan Remote Work?

Understanding how these remotes operate can help you appreciate their convenience.

Most Intertek ceiling fan remotes use radio frequency (RF) or infrared (IR) signals to communicate with the fan?s receiver unit. The receiver is installed in the fan?s canopy or motor housing, which receives commands from the remote to adjust speed settings, turn the fan on or o?, or activate lighting if integrated.

Radio Frequency vs. Infrared Remotes

Radio Frequency (RF): These remotes can operate through walls or from di?erent

rooms, o?ering more ?exibility. They don?t require a direct line of sight to the fan.

Infrared (IR): Require a clear line of sight between the remote and the fan

receiver. These are often more budget-friendly but less versatile.
