Sample Practice Questions and Rationales

Question 1: Airway Obstruction

A patient in the emergency room suddenly becomes cyanotic and is unable to speak. What is the priority action?

- A) Call for help and prepare for intubation
- B) Perform abdominal thrusts
- C) Provide oxygen via mask
- D) Assess airway patency

Answer and Rationale:

Correct Answer: D) Assess airway patency

Rationale: The immediate priority is to assess airway patency to determine if the airway is obstructed. Cyanosis and inability to speak suggest airway compromise. After assessment, appropriate interventions, such as abdominal thrusts or airway management, can be initiated.

Question 2: Recognizing Signs of Stroke

A patient presents with sudden weakness on one side, slurred speech, and facial droop. Which of the following actions should the nurse take first?

- A) Obtain a blood glucose level
- B) Call rapid response team
- C) Perform a neurological assessment
- D) Prepare for imaging studies

Answer and Rationale:

Correct Answer: A) Obtain a blood glucose level

Rationale: The first step is to rule out hypoglycemia, which can mimic stroke symptoms. Once hypoglycemia is excluded, further assessments and interventions can follow, including activating stroke protocols.
