These questions often ask students to identify congruence criteria or to prove that two triangles are congruent.

Sample Question:

Given two triangles with sides AB = DE, BC = EF, and angles ABC and DEF are congruent, determine if the triangles are congruent.

Approach:

- Check which criteria are satisfied (SSS, SAS, ASA, RHS)
- Use the given information to match the criteria
- Conclude congruency based on the criteria satisfied

Questions on Angle Properties

These involve calculating angles or proving relationships using theorems such as alternate interior angles, corresponding angles, or exterior angles.

Strategy:

- Identify the angles involved in the diagram
- Apply relevant theorems to find unknown angles
- Use algebraic expressions when necessary to solve for angles

Questions on Circles and Arcs

These questions test understanding of properties like angles subtended by the same arc, inscribed angles, and tangent-chord relationships.

Answer Tips:

- Recall key circle theorems (e.g., inscribed angles subtend the same arc are equal)
- Use diagram labels to identify arcs and angles
- Set up equations based on theorems to find unknown variables

Transformational Geometry Questions

These questions involve understanding how shapes move under transformations and identifying resulting figures or distances.

Answer Strategies:

- Recall transformation rules
- Apply transformations step-by-step to the given figure
- Use coordinate geometry for precise calculations when necessary
