Analysis of the Answer Key: Question-by-Question Breakdown

Note: The following sections interpret the answer key, providing detailed explanations for each question, the reasoning behind correct answers, and common misconceptions.

Question 1: Determining Market Equilibrium

- Correct Answer: The intersection point of supply and demand curves

- Explanation: This point reflects the price and quantity at which the quantity consumers are willing to buy equals the quantity producers are willing to sell. The answer emphasizes understanding how shifts in either curve affect equilibrium.

Question 2: Impact of a Price Ceiling

- Correct Answer: Creates a shortage
- Explanation: When a price ceiling is set below equilibrium, the quantity demanded exceeds quantity supplied, resulting in a shortage. The answer key underscores how shortages can lead to black markets or reduced quality.

Question 3: Elasticity of Demand Calculation

- Correct Answer: Percentage change in quantity demanded divided by percentage change in price
- Explanation: The answer elaborates on the midpoint formula and its importance in calculating elasticity, which influences consumer responsiveness to price changes.

Question 4: Consumer Surplus Illustration

- Correct Answer: The area below the demand curve and above the market price
- Explanation: This area represents the additional benefit consumers receive from purchasing a good at a price lower than their maximum willingness to pay.

Question 5: Monopoly and Price Setting

- Correct Answer: Monopolist sets marginal revenue equal to marginal cost
- Explanation: Unlike perfect competition, a monopoly maximizes profit by producing where marginal revenue equals marginal cost, which often results in a higher price and lower quantity.

Question 6: Calculating GDP Using the Expenditure Approach

Question 9: Long-Run Economic Growth Factors

- Correct Answer: Capital accumulation, technological progress, and human capital development
- Explanation: The answer underscores that sustained growth depends on these factors, which increase productivity over time.

Question 10: Comparative Advantage and Trade

- Correct Answer: Countries should specialize in producing goods where they have a lower opportunity cost
- Explanation: The importance of specialization and gains from trade is emphasized, along with potential trade barriers' effects.
