IPAF?s Philosophy on Rescue Planning

IPAF advocates for a proactive approach to rescue planning, emphasizing that rescue procedures should be an integral part of the risk assessment process and operational planning. The key principles include:

- Preparedness: Planning and training must be conducted before any work begins.
- Prevention First: While rescue plans are vital, efforts should focus on preventing incidents through safe operation and maintenance.
- Training and Competence: Only trained personnel should execute rescue procedures.
- Regular Review: Rescue plans should be periodically reviewed and updated to reflect changes in equipment, personnel, or work site conditions.

Core Components of an IPAF-Recommended Rescue Plan

A comprehensive rescue plan, as per IPAF guidance, encompasses several critical elements:

1. Risk Assessment and Planning

Before starting work, conduct a detailed risk assessment to identify potential rescue scenarios, considering:

- Types of AWPs used
- Work environment and terrain
- Potential hazards (e.g., electrical, environmental)
- Operator experience and training levels
- Site-specific constraints

Based on this, develop tailored rescue procedures addressing identified risks.

2. Designation of Rescue Roles and Responsibilities

Define clear roles for all personnel involved:

- Rescue Supervisor: Oversees the rescue operation, coordinates efforts.
- Rescue Team Members: Execute rescue procedures; must be trained and competent.
- Operator Involved: Provides information on the incident and the condition of the casualty.
- Additional Support Staff: As needed (e.g., first aid, emergency services).

Ensure everyone understands their responsibilities and is trained accordingly.

3. Equipment and Tools for Rescue

Identify and maintain appropriate rescue equipment, such as:

- Rescue harnesses, slings, and lanyards
- Portable rescue cradles or stretchers
- Extra control or lowering devices
- Communication devices (e.g., radios)
- Personal protective equipment (PPE)

Regular inspection and maintenance of rescue tools are imperative to ensure readiness.

4. Rescue Procedures and Techniques

Develop step-by-step procedures tailored to different scenarios:

- Manufacturer?s Instructions: Follow specific rescue procedures recommended by equipment

manufacturers.

Failure to develop and implement a rescue plan can result in legal penalties, insurance issues, and increased risk of injury.

Case Studies and Practical Examples

Example 1: Rescue from a Scissor Lift at a Construction Site

- The rescue team quickly lowered the platform using the emergency lowering device.
- The operator was secured with a harness and retrieved safely.
- Post-incident review identified the need for additional training, leading to improved rescue readiness.

Example 2: Rescue from an Boom Lift with Electrical Hazard

- The rescue team coordinated with electrical specialists before attempting rescue.
- Specialized PPE was used to prevent electrical shock.
- The incident underscored the importance of hazard-specific procedures.

Challenges and Common Pitfalls in Rescue Planning

While rescue plans are vital, several challenges may arise:

- Lack of Training: Teams untrained in rescue procedures can cause delays or exacerbate injuries.
- Inadequate Equipment: Outdated or unsuitable rescue tools hinder effective rescue.
- Poor Communication: Misunderstandings can lead to unsafe rescue attempts.
- Complacency: Assuming incidents won?t happen leads to neglect in planning and training.
- Site Constraints: Limited access or confined spaces complicate rescue efforts.

Addressing these pitfalls requires commitment, ongoing training, investment in equipment, and a culture prioritizing safety.

Conclusion: The Cornerstone of Safe AWP Operations

IPAF?s guidance on rescue plans underscores that preparedness, training, and continuous review are fundamental to safeguarding personnel working at height. A well-crafted rescue plan not only
