The Science of Relative Humidity Explained

Before diving further into the ExploreLearning Gizmo answer key relative humidity, it?s valuable to refresh the fundamental science behind the phenomenon.

What Is Relative Humidity?

Relative humidity (RH) is expressed as a percentage and indicates how saturated the air is

with water vapor. When the air holds all the moisture it can at a speci?c temperature, RH

is 100%, and the air is fully saturated, which often leads to dew, fog, or precipitation.

When RH is low, the air feels dry.

The formula for calculating relative humidity is:

\[

RH = \left(\frac{\text{Actual Vapor Pressure}}{\text{Saturation Vapor Pressure}} \right)

\times 100\%

\]

This equation shows that RH depends not only on the amount of water vapor present but

also on temperature since warm air can hold more moisture.
