The accounting cycle is the process of recording and processing all financial transactions of a business. It includes:

- Identifying transactions
- Recording journal entries
- Posting to ledger accounts
- Preparing trial balances
- Adjusting entries
- Preparing financial statements
- Closing temporary accounts

2. Financial Statements

Understanding and preparing the primary financial statements:

Assets = Liabilities + Owner's Equity

4. Accounting Principles and Assumptions

Core principles include:

- Revenue Recognition
- Matching Principle
- Conservatism
- Consistency
- Going Concern

5. Adjusting Entries and Closing Procedures

Adjusting entries are made at the end of accounting periods to update account balances, ensuring accurate financial statements. Closing entries reset temporary accounts to prepare for the next period.

Answers for Key Accounting Concepts in Copley 11e

Providing precise answers to typical questions encountered in the textbook helps students grasp essential concepts.

1. How do you prepare a trial balance?

Answer:

To prepare a trial balance, list all ledger accounts with their ending balances, debit or credit. Sum the debits and credits, ensuring they are equal. If totals do not match, review and correct errors in recording transactions, posting, or calculations.

2. What are the main types of adjusting entries?

Answer:

Main types include:

- Accrued revenues and expenses
- Deferred revenues and expenses
- Estimated items (e.g., depreciation)

These entries ensure that revenues and expenses are recognized in the correct accounting period.

3. How is depreciation recorded?

Answer:

Depreciation allocates the cost of a long-term asset over its useful life. It can be recorded using methods like straight-line or declining balance. The journal entry typically debits depreciation expense and credits accumulated depreciation.

4. What is the purpose of closing entries?

Answer:

Closing entries transfer the balances of temporary accounts (revenues, expenses, dividends) to permanent accounts like retained earnings, preparing the accounts for the next accounting period.

Practical Applications and Examples

Understanding the practical application of accounting principles is key. Here are some examples:

Example 1: Recording a Sale

Suppose a business makes a sale of \$1,000 cash. The journal entry would be:

- Debit Cash \$1,000
- Credit Revenue \$1,000

This transaction increases assets and owner's equity.

Example 2: Adjusting for Prepaid Expenses

If a company paid \$1,200 for insurance coverage for one year, monthly adjusting entries would be:

- Debit Insurance Expense \$100
- Credit Prepaid Insurance \$100

This recognizes the expense incurred each month.
